hypogea. The Ara h 2 protein has 10 IgE (Immunoglobulin E) binding epitopes, three of which are immunodominant (AAY15272, AAY15275, and AAY15275). By modifying the IgE binding sites the ability of the allergen to provoke an immune response is downregulated. The epitopes of the IgE binding sites can therefore be modified in genetically engineered plants and animals to elicit less of an allergic response. (Updated on 17-OCT-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                            g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to a novel isolated nucleic acid molecule encoding the peanut allergen Ara h I that has been identified in patients with a topic dermatitis. Specifically, it refers to a monoclonal antibody enzyme-linked immunosorbant assay (ELISA) used to detect and quantify the enzyme-linked immunosorbant assay (ELISA) used to detect and quantify the peanut allergens, where the monoclonal antibodies have specificity for a selected peanut allergen antigen. The present invention also describes hybridomas that produce two-site monoclonal antibodies specific for a peanut allergen in a food product or in food processing. Furthermore, it provides an expression vector and the processing. Furthermore, it provides an expression vector and the solated nucleic acids are useful for obtaining diagnostic set with optimal concentrations of each allergen or for developing panels of mixtures of large numbers of recombinant allergens such that it can be used in immunotherapy for the treatment of food hypersensitivity reactions. This polynucleotide sequence is the peanut Ara h II allergen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CCCGTACAGCCCTAGTCAGGATCCGTACAGCCCTAGTCCATATGATCGAGAGGGCGCTGG 245

The sequence represents the coding sequence of anaphylactic antigen Ara h 2 is an anaphylactic antigen (A), which was used to design antigenic peptides having a reduced ability to bind immunoglobulin E (19E) as compared with the intact (A), or having a sequence substantially identical to a portion of sequence of an antigen that includes at least one 1gE binding site of the peptide is altered. The antiqenic peptides are used in a composition which is useful for reducing risk or severity of allergic reaction to an antigen. This is done by identifying an individual at risk of allergic reaction to an antigen by identifying prior display of allergic symptoms when exposed to the antigen. The antigen-specific 1gE present on one or more mast cells or basophils in the individual's serum is identified. The individual is then contacted with a peptide corresponding to a portion of the antigen. Which is selected, formulated, and delivered so that binding of the peptide to antigen-specific 1gE ireduced as compared with 1gE binding confined that the individual is reduced as compared with 1gE binding of intact antigen. The composition is also useful for treating and

                                                                                                                                                                                                                                      셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a modified anaphylactic food allergen has an amino acid sequence that is substantially identical to that of natural anaphylactic food allergen, except for a cysteine residue that has been modified so that it cannot participate in the disulphide bond. The modification may also comprise mutation of the IgE binding sites to reduce allergenicity. Also included are: (1) a method of making a modificat anaphylactic food allergen; (2) a nucleotide molecule encoding or for causing a site specific mutation in the modified anaphylactic food allergen; (2) a nucleotide molecule encoding or for causing a site specific mutation in the modified anaphylactic food allergen; (4) a method of treating an individual by reducing the clinical response to a natural anaphylactic food allergen; anaphylactic food allergen is useful for preventing or treating allergen; cand an isolated fragment of peanut allergen such as food, insect, reactions associated with any natural allergens such as food, insect, treating wounds in mammals such as bovine, cannot, feline, caprine, ovine, porcine, mutine or equine species. The present sequence is a CDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CAGTGGGAACTCCAAGGAGACAGAAGATGCCAGAGCCAGCTCGAGAGGGGGAACCTGAGG 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Dodo HW,
                                                                                                                                                                        à
                                                                                                                                                                                                                                                                        The invention relates to a modified anaphylactic food allergen whose anaphylactic food allergen. The natural anaphylactic food allergen in cluddes at least one cysteine residue that participates in a disulphide bond when the natural anaphylactic food allergen is in its native conformation, except that the cysteine residue has been modified so that it cannot participate in the disulphide bond. Also included are a method of making a modified anaphylactic food allergen, a nucleotide molecule for causing a site specific mutation in a gene encoding a natural anaphylactic food allergen, a transgenic plant or animal expressing a modified anaphylactic food allergen defined above, a nucleotide molecule for causing a site specific mutation in a gene encoding a natural anaphylactic food allergen defined above, a natural anaphylactic food allergen by reducing the clinical response to a natural anaphylactic food allergen by administering a modified anaphylactic food allergen and isolated fragment of peanut allergen and an isolated fragment of peanut allergen series of the amino acids have been modified in at least one IgE epitope or all the IgE epitopes recognised when the natural anaphylactic food allergen and an isolated with serum IgE from individual (s) allergen pugn Jugn in. The modified anaphylactic food allergen and an individual consecutive anaphylactic food allergen and an individual consecutive and their encoding consecutive anaphylactic food allergen and an additied anaphylactic food allergen and an add
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       rccrcrcagcaccaagagagargrrgcaargagcrgaacgagrrrgagaacaaccaaagg 300

The present sequence is that of the peanut allergen Ara h2 gene coding region. A portion of the Ara h2 gene is homologous to corresponding regions of the peanut allergen Ara h6 and Ara h7 genes. This region has comen for a manifered by the and Ara h7 genes. This region has considered by the and antisense orientations and used to down-regulate Ara h2, Ara considered and antisense orientations and used to down-regulate Ara h2, Ara condition, which relates to the production of a peanut plant having reduced, or undetectable, allergenic protein (AP) content in its seed. A contines and/or sense AP gene, or their fragments, regenerated antisense AP gene and/or sense AP gene, or their fragments, regenerated antisense AP gene, or their fragments, regenerated to plants, and fertile transgenic plants that produce seeds with reduced AP content are identified. The AP sense or antisense gene may comprise at the approach of the Ara h2 gene. The seeds are useful for preparation class are the foods. (Updated on 11-SEP-2003 to standardise OS field)

The present sequence is that of the peanut allergen Ara h2 gene. The gene was identified following screening of genomic DNA using a probe (see AAB9042) based on the known Ara h2 coDNA sequence, subcloning of positive clones into a phagemid vector, restriction enzyme digestion, ligation with vector DNA, Southern hybridisation and sequencing. The gene encodes 20.7-amino acid allergenic protein (see AAB9283). The invention relates to a method for producing a peanut plant having reduced, or undetectable, allergenic protein (AP) content in its seed. A peanut plant cell is transformed with a DNA construct containing an antisense AP gene and/or sense AP gene, or their fragments, respensed to plants, and fertile transgenic plants that produce seeds with reduced AP content are identified. The AP sense or antisense gene may comprise at least a portion of the present sequence. The seeds are useful for preparation of allergen-free foods. Recombinant AP may be produced and used to produce antibodies useful for detecting AP in foods, and for treatment or prevention of peanut allergy. (Updated on 11-SEP-2003 to standardise OS

This sequence represents the coding sequence for soybean albumin 3. This sequence represents a DNA molecule of the invention. The DNA molecules of the invention comprise a preselected DNA segment encoding a seed storage protein (SSP). (I) is used to produce transgenic seeds and plants, especially soybean plants that have increased levels of lysine and also increased levels of methionine and/or cysteine in albumin protein type 1 and/or 3. Increasing the levels of these amino acids increases the nutritional value of soybean produced. This is especially useful for producing animal feeds. The amount of lysine in the seed is increased by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Increasing the nutritional quality of soybean - by genetically increasing the amount of lysine, methionine and/or cysteine in albumin proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           67 GGAACTCCAAGGAGACAGAAGATGCCAGAGCCAGCTCGAGAGGGCGAACCTGAGGCCCTG 126

The probe was used to screen a peanut genomic library for the isolation of the Ara h2 gene (see AAF90136). The invention relates to a method for producing a peanut plant having reduced, or undetectable, allergenic protein (AP) content in its seed. A peanut plant cell is transformed with a DNA construct containing an antisense AP gene and/or sense AP gene, or their fragments, regenerated to plants, and fertile transgenic plants that produce seeds with reduced AP content are identified. The AP sense or antisense gene may comprise at least a portion of the present sequence. The seeds are useful for preparation of allergen-free foods. Recombinant AP may be produced and used to produce antibodies useful for detecting AP in foods, and for treatment or prevention of peanut allergy. (Updated on 11-SEP-2003 to standardise OS field)

molecule of the invention. The DNA molecules of the invention comprise a preselected DNA segment encoding a seed storage protein (SSP). (I) is used to produce transgenic seeds and plants, especially soybean plants that have increased levels of lysine and also increased levels of methionine and/or cysteine in albumin protein type 1 and/or 3. Increasing the levels of these amino acids increases the nutritional value of soybean produced. This is especially useful for producing animal feeds. The amount of lysine in the seed is increased by 5·10 %, the amount of methionine and cysteine is increased by 10·30%
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        275

This is the nucleotide sequence of a 770 bp portion of an isolated CDNA clone that codes for a soybean cotyledon-specific protein, termed Gm25-1 (see AAV05723). The CDNA was isolated in a search for sulphur-rich proteins in soybean seed. A CDNA library was prepared using polyA RNA from mid-maturation seed of soybean cv. Hodgson 78 and subjected to a RACE protocol using primers based on an N-terminal peptide of the curifical protein. The complete cDNA codes for a protein having a 21-amino acid residue signal peptide and a pro-protein that is post.

CHUMSAIN) with a unique C-terminal end containing the RGD cell adhesion motif followed by 8 Asp residues, a 17-amino acid linker peptide, and a 77 amino acid (8 kDa) large subunit (alisin) that is rich in sulphur contains in 19sine (13.0%) and cysteine (7.8% methionine) in 19sine (13.0%) and cysteine (7.8% protocol peptide, protein a target cell, including mammalian, plant and bacterial colls, in vitro or in situ. The methods involve contacting the cell with a nucleic acid encoding the peptide, particularly a lunasin and/or alisin peptide. The peptide modulates expression of a resident Gm25-1 peptide-encoding contranscript. The invention also encompasses nucleic acid hybridisation probes and primers for use in identifying, cloning, compliance or transcript. The invention also encompasses nucleic acid muplifying and/or medulating the expression of a resident Gm25-1 peptide-encoding contacting the modulating the expression of a modulating the expression of a dem25-1 peptide-encoding conspiration of modulating the expression of a dem25-1 peptide cell demandating the expression of a dem25-1 peptide cell demandating the expression of a modulating the expression of a dem25-1 peptide cell demandating the expression of a dem25-1 peptide cell demandating the expression of a dem25-1 peptide cell demandating the expression of a dem25-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                99

and drought tolerance. The immature pods that developed to R6 stage were collected from different plants, and placed into liquid N2 immediately and stored in -80oC freezer. Total RNA was islamed with TRIZOL-Reagent ultrapure (GIBCOBRL). mRNA was extracted and purified from total RNA (Promega). cDNA synthesis and library construction followed the protocol of by ZAP-cDNA Gigapack III Gold cloning kit (Stratagene). The cDNA above 500bp were collected after size-fraction. The inserts were directionally cloned into Unic.ZAP, XR vector using XhoI
                                                                                                                                                                                                              ECORI sites adapters. The lamda library was packed into phages using Gigapack III Gold (Stratagene). The un-amplified library was used to excise pBluescript phagemids from the Uni-ZAP XR vector, and the phagemids was used to transform the host bacteria SOLR. The library was constructed by Dr. Meng Luo and Dr. Phat Dang."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  540

/ucce="Vector: Uni-ZAP XR; Site 1: EcoRI; Site 2: XhoI; CDNA library was constructed from peanut cultivar Al3 (NCV11XARA). Al3 has resistance to Aspergillus infection and drought tolerance. The immature pods that developed to R6 stage were collected from different plants, and placed into liquid N2 immediately and stored in -80oC freezer. Total RNA was isolated with TRIZOL-Reagent ultrapure (GIBCOBRL). mRNA was extracted and purified from total RNA (Promega). cDNA synthesis and library construction followed the protocol of by ZAP-CDNA Gigapack III Gold cloning kit (Stratagene). The cDNA above 50bb were collected after size-fraction. The inserts were directionally cloned into Uni.ZAP XR vector using XhoI EcoRI sites adapters. The landa library was packed into phages using Gigapack III Gold (Stratagene). The un-amplified library was used to extise plauescript phagemids from the Uni-ZAP XR vector, and the phagemids was used to transform the host bacteria SOLR. The library was constructed by Dr. Meng Luo and Dr. Phat Dang."

/OCCE="Vector: Uni-ZAP XR; Site 1: ECORI; Site 2: Xhol; CDNA library was constructed from peanut cultivar Al3 (NCV1XARA). Al3 has resistance to Appergillus infection and drought tolerance. The immature pods that developed to R6 stage were collected from different plants, and placed into liquid N2 immediately and stored in .80oC freezer. Total RNA was isolated with TRIZOL-Reagent ultrapure (GIBCOBRL). mRNA was extracted and purified from total RNA (Promega). cDNA synthesis and library construction followed the protocol of by ZAP-cDNA Gigapack III Gold cloning kit (Stratagene). The cDNA above 500bp were collected after size-fraction. The inserts were directionally cloned into Uni-ZAP XR vector using XhoI ECORI sites adapters. The lamda library was packed into phages using Gigapack III Gold (Stratagene). The un-amplified library was used to excise pBluescript phagemids from the Uni-ZAP XR vector, and the phagemids was used to transform the host bacteria SOLR. The library was constructed by Dr. Meng Luo and Dr. Phat Dang."

(UVIPP) (UVIPP) (UVIPP) (UVIPP) (UVIPP) (UVIPP) (UVIPP) (UVIPP) (UVIPP) (UVIVINAR4) as constructed from peanut cultivar All (NOVINAR4) all has resistance to Aspergillus infection and drought tolerance. The immature pods that developed to R6 stage were collected from different plants, and placed into liquid N2 immediately and stored in -80oC freezer. Total RNA was isolated with TRIZOL-Reagent ultrapure (SIBCOBR). mRNA was extracted and purified from total RNA (Promega). cDNA synthesis and ilbrary construction followed the protocol of by ZAP-CDNA Gigapack III Gold cloning kit (Stratagene). The cDNA above 500bp were collected after size-fraction. The inserts were directionally cloned into Uni-ZAP XR vector using XhoI ECORI sites adapters. The lamda library was packed into phages using Gigapack III Gold (Stratagene). The un-amplified library was used to excise plausescript phagemids from the Uni-ZAP XR vector, and the phagemids was used to transform the host bacteria SOLR. The library was constructed by Dr. Meng Luo and Dr. Phat Dang."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         linear EST 07-MAY-2003

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (UVIPP) (VOICE="Vector: Uni-ZAP XR; Site 1: ECORI; Site 2: XhOI; CDNA library was constructed from peanut cultivar Al3 (NCVIIXAR4). Al3 has resistance to Appergillus infection and drought tolerance. The immature pods that developed to R6 stage were collected from different plants, and placed into liquid N2 immediately and stored in -80oC freezer. Total RNA was isolated with TRIZOL-Reagent ultrapure (GIBCOBRL). mRNA was extracted and purified from total RNA (Promega). CDNA synthesis and library construction followed the protocol of by ZAP-CDNA Gigapack III Gold cloning kit (Stratagene). The cDNA above 500bp were collected after size-fraction. The inserts were directionally cloned into Uni-ZAP XR vector using XhoI ECORI sites adapters. The lamma library was packed into phages using Gigapack III Gold (Stratagene). The un-amplified library was used to excise pBluescript phagemids from the Uni-ZAP XR vector, and the phagemids was used to transform the host bacteria SOLR. The library was used to transform the host bacteria SOLR. The library was constructed by Dr. Meng Luo and Dr. Phat Dang."

CDNA library was constructed from peanut cultivar Al3
(NCVIIXARA). Al3 has resistance to Aspergillus infection
and drought tolerance. The immature pods that developed to
R6 stage were collected from different plants, and placed
into liquid N2 immediately and stored in -80oC freezer.
Total RNA was isolated with TRIZOL-Reagent
ultrapure (GIRCORN). mRNA was extracted and purified from
total RNA (Promega). CDNA synthesis and library
construction followed the protocol of by ZAP-CDNA Gigapack
III Gold cloning kit (Stratagene). The cDNA above 500bp
were collected after size-fraction. The inserts were
directionally cloned into Uni-ZAP XR vector using XhoI
ECORI sites adapters. The lamda library was packed into
phages using Gigapack III Gold (Stratagene). The
un-amplified library was used to excise pBluescript
phagemids from the Uni-ZAP XR vector. and the phagemids
was used to transform the host bacteria SOLR. The library
was constructed by Dr. Meng Luo and Dr. Phat Dang."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    g
ACVIIXAR4). Al3 has resistance to Aspergillus infection and drought tolerance. The immature pods that developed to Re stage were collected from different plants, and placed into liquid N2 immediately and stored in -80oC freezer. Total RNA was isolated with TRIZOL-Reagent ultrapure (GIBCOBRL). mRNA was extracted and purified from total RNA (Promega). CDNA synthesis and library construction followed the protocol of by ZAP-CDNA Gigapack III Gold cloning kit (Stratagene). The cDNA above 500bp were collected after size fraction. The inserts were directionally cloned into Uni-ZAP XR vector using XhoI EcoRI sites adapters. The landal library was packed into phages using Gigapack III Gold (Stratagene). The un-amplified library was used to excise pBluescript phagemids from the Uni-ZAP XR vector. and the phagemids was used to transform the host bacteria SOLR. The library was constructed by Dr. Meng Luo and Dr. Phat Dang."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CD038326 UYPPI005_F10 USDA-Tifton Peanut Immature Pod cDNA Library (UTPP)
